Assignment -2 in LATEX

Muzaan Mohammed Faizel A P **EE22BTECH11036**

Question 10.13.1.26: A school has five houses A, B, C, D and E. A class has 23 students, 4 from house A, 8 from house B, 5 from house C, 2 from house D and rest from house E. A single student is selected at random to be the class monitor. The probability that the selected student is not from A, B and C is

Solution: Total no of students=23

House	A	В	С	D	Е
Students	4	8	5	2	4

TABLE 0: Student distribution in each house

$$X = \begin{cases} 0, & \text{if student is from A,B and C} \\ 1, & \text{if student is not from A,B and C} \end{cases}$$
(1)

With reference to Table 0

$$p_X(0) = \Pr(A) + \Pr(B) + \Pr(C)$$
 (2)

$$= \frac{4}{23} + \frac{8}{23} + \frac{5}{23}$$

$$= \frac{17}{23}$$
(3)

$$=\frac{17}{23}\tag{4}$$

$$p_X(1) = 1 - p_X(0) (5)$$

$$=1-\frac{17}{23}$$
 (6)

$$=\frac{6}{23}\tag{7}$$

The desired probability is:

$$p_X(1) = \frac{6}{23} \tag{8}$$
